**Developing and Implementing a Plan**

You must have a Plan that includes erosion and sediment control for your construction activity. This Plan requires:

- Administrative Planning and Training to ensure proper implementation of the BMPs
- Erosion and Sediment Control Plan
- Stormwater Management Plan
- Site-specific Pollution Prevention Plan
- Pollution Prevention Plan

**Preconstruction Checklist**

- Nature of the activity
- Assessment of construction activity
- Total area of site
- Total number of employees and their responsibilities
- Key dates
- Project specific water pollution controls
- On-site construction being performed
- Stormwater monitoring
- Stormwater sampling
- Stormwater management

**Erosion and Sedimentation Control Practices are only as good as their installation and maintenance.**

**5. Implementing and Maintaining a Plan**

- Implement controls
- Inspect and maintain controls
- Report releases of hazardous materials

A Plan describes the procedure and activities you use to prevent stormwater pollution during construction activities. The Plan may address specific requirements for stormwater management controls. The Plan is an integral part of your stormwater management program. It describes your control strategy and how it will be implemented. A Plan must be prepared and approved before construction begins. The Plan must be available at the site.

**Implementation Checklist**

- Minimum scope of construction activities
- Dates when minor grading activities occur
- Dates when construction activities temporarily cease on the site
- Dates when major grading occurs
- Necessary changes to the Plan
- Reports of releases of hazardous materials
- Construction activities
- Stormwater management
- Pollution prevention
- Implementation of the Plan
- Preconstruction training
- Necessary changes to the Plan
- Record retention
- Preparation of reports for construction and deconstruction
- Implementation of the Plan
- Preconstruction training
- Implementation of the Plan
- Stormwater management
